Editor-in-Chief's Message

The second CHOPS international conference has come and gone, but we are still basking in the euphoria of hosting an amazing conference.

From the impactful Green School Initiative where Choppers in partnership with 21 Rotary Clubs in Nigeria and Ghana evacuated two refuse dumps right within a school premises to the conference and AGM that dealt with critical issues about sustaining an international fellowship as ours down to the host hospitality that was topnotch with visits to the Port Harcourt Boat Club in the heart of old Port Harcourt Township? It was truly a premium Garden City experience. For those who missed out on the fun, catch a glimpse of it in this edition.

Are we really winning the fight against malaria? We take a pause to ponder on this critical question as the world observed the world malaria day on April 25. How is Rotary contributing to the fight against malaria? Find out more about this and what haemophilia is all about in our health corner.

Indeed April is a month with fond memories we won't forget in a hurry and I invite you to share this edition with some one else so they can see how we are still carrying on the vision of creating hope in the world.

International Leader's Message

APRIL, 2026

Dear CHOPs Family,

Happy New Month! Wishing you all a blessed and fulfilling day ahead.

April is here — and with it comes renewed energy to create hope and make impact together. As we look ahead, let us stay excited and committed to our highly anticipated 2026 CHOPs International Conference in the Garden City, Port Harcourt. I encourage every CHOPper to register, prepare, and be part of this defining gathering.

Registration is also open to guests and friends of CHOPs — let's extend the invitation and grow our fellowship.

Kindly remember that your dues and continuous support remain vital to the

success of our programs and the conference. Therefore, endeavor to redeem your pledge made at the last Abuja CHOPS Conference during the CHOPS Fellowship Digest launch. Together, we can achieve more.

Let us move forward this month with purpose, unity, and passion as we continue creating hope in the world.

AG Capt. Paul Ojinta, MD
*International Leader
Create Hope Presidents
Fellowship (CHOPs)
March 2026*

Create Hope Presidents Hold 2nd International Conference With A Call For Greater Love And Commitment To Humanitarian Service

Create Hope Presidents have been called upon to love one another and be transparent in their dealings as a way to sustain the fellowship.

This was the charge from Hope District Governors at the second CHOPS international conference, which held in the Garden City of Port Harcourt with the theme: 'Inspiring action; create Hope.'

CHOPS International leader Rtn. Paul Ojinta in his welcome address noted that as Rotarians who are

people of action, we understand that the privilege of leadership carries the duty to act, to inspire, to influence and deliver results that positively impact lives and serve society by closing identified gaps in healthcare, education and environmental sustainability.

"We are here to create hope. We are here because the world around us demands more. Across our communities, we see gaps, we see healthcare issues and needs in education, but in CHOPS, we are

focused more on environmental sustainability and leadership empowerment.

We are people of action, and this action begins when we challenge ourselves, challenge our old methods and embrace innovation, and commit to excellence in service delivery." He said.

Delivering the keynote address, past district governor, Rotary District 9110 Rtn Ify Ejezie, encouraged members to embrace innovation and

the torch of hope even after their year of service.

"Since 2023/2024 you have led projects that fed the hungry, educated children, supported refugees, strengthened communities and advanced peace. You have shown that hope is not an abstract idea but something we build together through service.

remain open to ideas that can drive the fellowship's next phase of growth.

She warned against internal divisions, urging members to keep criticisms constructive.

"We want to promote international understanding and peace across the world. We want to foster global operation among Rotarians despite coming from different cultures."

underscored the role of mental well-being in effective service, noting that our well-being is not separate from our service as hope cannot come from an empty vessel.

He emphasised that the theme, Create Hope, is a call to action to bring light where there's darkness and opportunity where there's none and Choppers through effective leadership in their various clubs brought that to light and are even carrying on

The world we know continues to face serious challenges... in such a world, the need for hope has never been greater. But hope does not emerge on its own. It must be created intentionally, consistently, and passionately. That is why your continued service matters so deeply."

Participants described the conference as impactful, noting it has strengthened their bond and sharpened focus on results-driven service which they would take back home.

Conference Chairman and Past District Governor Rotary District 9125 Rtn Sagab Ahmed said Rotary's interventions from clean water provision to polio eradication already embody the spirit of creating hope. He called for stronger accountability and deeper international collaboration as Choppers continue creating hope in the world.

Past Rotary International President, Gordon McNally, who spoke virtually,

We are people of action, and this action begins when we challenge ourselves, challenge our old methods and embrace innovation, and commit to excellence in service delivery

As Past President Susan Bassey from Kaduna D9127 said, "when I go back, I will engage my fellow Create hope Presidents who are not here, telling them the importance of us being together to synergize and show love to one another."

Also, Past President Adaobi Onyeka from District 9111 recalled that during their year, their zone gave free surgeries of which 60

persons benefitted and that bonded them as presidents.

"So tapping into this fellowship was easy. I hope more Hope Presidents from all over the world will key into this fellowship because we are doing a lot of great things"

The conference also featured a panel discussion on key pillars required to build and sustain

meaningful international relationships, a leadership roundtable on building a sustainable international fellowship and presentation of awards to deserving Choppers who supported the conference.

CHOPS fellowship now has active members across Nigeria, Ghana, Bangladesh, South Africa, the United States, Canada, Zambia, Zimbabwe, Malawi, Cameroon, Mozambique and Kenya.

Create Hope Presidents, 21 Rotary Clubs Evacuate Two Refuse Dumpsites At Government Secondary School, Elekahia

By Rtn Karina Igonikon
RC PH Garden City

As a way to providing a conducive learning environment for students of Government Secondary School, Elekahia, Create Hope Presidents in partnership with 21 Rotary clubs in Port Harcourt, Owerri, Lagos, Benin and Accra Ghana evacuated two refuse dumpsites within the school premises.

The project is part of activities marking the second Create Hope Presidents International conference, which held in Port Harcourt.

The project called the Green School Initiative GSI which covers several Rotary areas of focus like disease prevention and treatment, basic education and literacy, was done in line with the theme for the month of April, which is the environment.

Project coordinator of the GSI, Rtn Otonye Ekine said the refuse dumps within the school premises was not healthy as such the need to evacuate it and teach the students environmental awareness and the proper waste disposal habits.

"When we came into Government Secondary School Elekahia, we saw a peculiar case as we met their waste management system in a very poor state. They were just dumping their waste anyhow and just beside the refuse dumps was their eating area so we felt that to check the outbreak of a possible epidemic, we should take steps to evacuate the dumps and that's what we did."

The project also features a school clean up exercise, planting of trees, distribution of recycling waste bins, and environmental

awareness talks to the students

District Governor Rotary District 9141, Rtn. Anthony Osaretin Woghiren charged the students and school leadership to ensure they put to practise the tips and equipment given to them to ensure a healthy environment for teaching and learning.

He pledged Rotary's continuous support as the school had previously benefited from other Rotary intervention projects like the construction of toilets and provision of water as well as the provision of desks and chalk boards for some classrooms among others.

Hope District Governor, PDG Ify Ejezie from District 9110 Lagos lauded the initiative as one that continues creating hope in the world given that it not only prevents disease but also preserves the environment for learning to take place.

"For us health is wealth. When our people came here, they saw a big refuse dump, which is hazardous to the children. The first thing we did was to evacuate the dump because that would bring all kinds of diseases for the children and make them sick even when they came to school to learn.

But because we need to sustain what we have done, we felt we needed to keep the school tidy and so we donated dustbins and other things they would need and also plant trees that will grow to protect the environment.

So if the school sustains what we have given them, we would be willing to come again to see other areas we can assist," she added.

For the principal of Government Senior Secondary School Elekahia, Ngozi Lilian Amadi, this was a timely intervention to the school that protects the health of the students while providing a conducive environment for learning.

The Green School Initiative was carried out by Create Hope Presidents in collaboration with the Rotary clubs of Port Harcourt City Valley, PH Skywaves, Bonny Island, PH Medical Towers, PH Rebisi Kingdom, PH GRA, PH Dolphins, PH Midtown, PH Ceapoly and PH East.

Others are Owerri Royals, Akute, Mende Midtown, Isiokpo, PH Lighthouse, PH Golf Estate, and PH Skyfield.

Rotary Clubs of Rumuomasi, Accra Airport Ghana, Port Harcourt, and Benin Kingsquare were also involved.

CHOPPERS FUN TIME AT THE 2ND CHOPS INTERNATIONAL CONFERENCE TAGGED PREMIUM GARDEN CITY

The second CHOPS international conference was not all talk and project as Create Hope Presidents had time to let down their hair in some fun activities.

According to the Central Planning Committee Chairman, AG Chika Ohagba, this second conference has proved that CHOPS is more than an acronym from the 2023-2024 Rotary year as it has showed that Choppers are a family bound by service and purpose. As such, the team building activities aim to bond them

closer in an atmosphere of camaraderie.

Starting with the meeting and greet cocktail to welcome the early arrivals on Thursday 23rd April at the Casioni pool bar.

On Friday 24th April, after the Green School Initiative project, Choppers went on a picnic at Port Harcourt Pleasure Park and enjoyed a unique experience at the Port Harcourt Boat Club in the heart of Old Port Harcourt Township. The evening clubbing was not left out to the night crawlers.

On Saturday 25th April, Choppers enjoyed a splendid All White party to wrap up the conference.

For the Host Organising Committee Chair, AG Peter Tochukwu Okoro, the fun time activities were specially curated for Choppers to relax, enjoy themselves, and remember the Garden City with nostalgia

Indeed, premium Garden City lived up to its promise, and in case you missed it, here is a glimpse of some of the memorable fun and games.

Building Bridges, Not Barriers

*We choose not walls of fear or stone,
But bridges strong, where trust is grown.
Where voices clash, we dare to hear,
And turn sharp lines to paths made clear.
With truth as guide and hearts aligned,
We heal the wounds that hate designed.
Rotary stands where peace begins,
Not ends of war, but change within.
Is it the truth, is it fair to all?
Will it build goodwill, and benefit all?*

WORLD HAEMOPHILIA DAY:

WORLD HAEMOPHILIA DAY: DIAGNOSIS, FIRST STEP TO CARE

*By Rtn. Nrs. Madonna Chigonum
Wichendu PhD
RC PH Medical Towers*

in which the blood does not clot properly due to a deficiency of specific clotting factors. This leads to prolonged bleeding, either externally or internally.

Every year on April 17, the global community observes World Haemophilia Day, a day dedicated to increasing awareness about haemophilia and other inherited bleeding disorders.

The theme for 2026 Haemophilia Day is, 'Diagnosis: First Step to Care,' and it highlights a critical reality: many individuals worldwide remain undiagnosed, especially in low-resource settings. Without diagnosis, appropriate care cannot begin.

UNDERSTANDING HAEMOPHILIA

Haemophilia is a rare, inherited bleeding disorder

TYPES OF HAEMOPHILIA

Haemophilia is mainly classified based on which clotting factor is missing or deficient in the blood.

1. Haemophilia A (Classic Haemophilia)

- Caused by a deficiency or absence of clotting factor VIII (8)
- This is the most common type, accounting for about 80% of cases
- Mostly affects males, while females are often carriers
- Severity may be mild, moderate, or severe depending on factor VIII levels

2. Haemophilia B (Christmas Disease)

- Caused by a deficiency of clotting factor IX (9)
- Less common than Haemophilia A
- Symptoms are similar to Haemophilia A
- Also inherited in an X-linked pattern, meaning it predominantly affects males, while females are often carriers

3. Haemophilia C

- Caused by deficiency of clotting factor XI (11)
- Much rarer than A and B
- Can affect both males and females
- Usually milder and often discovered after surgery or trauma
- More common in certain ethnic groups, such as Ashkenazi Jews.

SEVERITY LEVELS

- **Mild:** Bleeding mainly after surgery or injury
- **Moderate:** Occasional spontaneous bleeding
- **Severe:** Frequent spontaneous bleeding, especially into joints and muscles

SIGNS AND SYMPTOMS

Common symptoms include:

- Prolonged bleeding from cuts or injuries
- Frequent nosebleeds
- Easy bruising
- Bleeding into joints (causing pain and swelling)
- Excessive bleeding after surgery or dental procedures
- In infants: prolonged bleeding after circumcision

DIAGNOSIS: THE FIRST STEP TO CARE

The 2026 theme emphasizes that early and accurate diagnosis saves lives and prevents complications.

Haemophilia can be diagnosed by :

- Detailed medical and family history
- Blood tests to measure clotting factor levels
- Genetic testing (in some cases)

Unfortunately, in many developing countries, including parts of Nigeria, limited awareness and diagnostic facilities lead to delayed or missed diagnosis, increasing the risk of disability and death.

HOW DO WE MANAGE IT?

While there is currently no permanent cure, haemophilia can be effectively managed especially if diagnosed early enough.

Some of the ways to manage haemophilia are:

- Supportive Care
- Pain management
- Physiotherapy to prevent joint damage
- Lifestyle Modifications
- Avoid high-risk activities
- Maintain healthy weight
- Practice good oral hygiene
- Regular follow-up
- Care at specialized haemophilia treatment centres/ tertiary health institutions

*World
Haemophilia Day
reminds us that no
one should suffer
in silence due to
lack of diagnosis
or care.*

HOW CAN WE CARE?

Caring for individuals with haemophilia goes beyond medical treatment:

- Emotional Support: Encourage inclusion and reduce stigma
- Education: Teach patients and families about bleeding prevention
- Access to Care: Advocate for availability of treatment facilities
- Community Support: Create support groups and safe environments

WHY IS IT IMPORTANT TO RAISE AWARENESS?

Awareness is key to early diagnosis and improved outcomes.

WAYS TO RAISE AWARENESS

- Organize health talks in schools and communities
- Use social media campaigns
- Engage healthcare professionals in continuous education

- Partner with organizations like the World Federation of Hemophilia
- Encourage routine screening in families with history of bleeding disorders

THE WAY FORWARD

The message of 2026 is clear: Diagnosis is not the end, it is the beginning of care. When haemophilia is diagnosed early:

- Complications are reduced
- Quality of life improves
- Individuals can live full, productive lives

World Haemophilia Day reminds us that no one should suffer in silence due to lack of diagnosis or care. By increasing awareness, improving access to diagnostic services, and strengthening treatment systems, we can ensure that every person with haemophilia receives the care they deserve.

Every voice matters. Every action counts. Diagnosis is the first step, but appropriate care must follow.

World Hemophilia Day

April 17

Recognizing all bleeding disorders

*By Rtn. Nrs. Madonna Chigonum
Wichendu PhD
RC PH Medical Towers*

Are We Truly Winning The Fight Against Malaria?

Every year on April 25, the world marks World Malaria Day, a day set aside to raise awareness, assess progress, and renew global commitment to ending one of humanity's oldest and deadliest diseases.

For many Africans, malaria is often dismissed as a routine illness, ***“just another fever” or “like the flu.”*** But this perception can be dangerously misleading. Malaria remains a major public health challenge, especially in sub-Saharan Africa, where millions of cases and deaths still occur yearly. Nigeria continues to carry one of the world's heaviest malaria burdens, making awareness, prevention, and treatment more important than ever.

UNDERSTANDING MALARIA: MORE THAN “JUST A FEVER”

Malaria is a life-threatening disease caused by plasmodium parasites, transmitted through the bite of infected female Anopheles mosquitoes.

Common symptoms include:

- Fever
- Chills
- Headache
- Body weakness
- Vomiting
- Sweating

While early malaria may resemble flu-like illness, untreated or poorly treated malaria can rapidly progress to severe disease and even death.

ARE WE WINNING THE FIGHT AGAINST MALARIA?

The Good News:

Over the last two decades, global malaria control efforts have saved millions of lives through:

1. Wider use of insecticide-treated mosquito nets
2. Improved diagnosis with rapid test kits
3. Effective medications such as Artemisinin-based Combination Therapies (ACTs)
4. Community awareness campaigns
5. Increased international funding organizations such as the World Health Organization, governments, NGOs, and local partners have contributed significantly.

The Challenge:

Despite progress, malaria remains stubborn due to the following factors :

- Drug-resistant malaria parasites
- Insecticide-resistant mosquitoes
- Poor sanitation and stagnant water
- Poverty and weak healthcare systems
- Climate change expanding mosquito habitats

Bottom Line:

We have made progress, but we are not yet winning decisively.

New Strategies in Malaria Prevention and Treatment

1. Malaria Vaccines

The introduction of vaccines has helped significantly to reduce severe malaria in children as well as lower hospitalization rates. Though not a complete cure, vaccines are a major breakthrough.

2. Next-Generation Mosquito Nets

Modern dual-insecticide treated nets combat resistant mosquitoes better than older nets, thereby providing better child and maternal protection.

3. Rapid Diagnostic Tests (RDTs)

Quick diagnosis before treatment helps prevent misuse of malaria drugs, hence aids more accurate diagnosis, faster treatment, and reduced rates of self-medication.

4. Artemisinin-based Combination Therapy

(ACT). This is still the gold standard for uncomplicated malaria and is highly successful when used correctly, though resistance remains a growing concern.

5. Seasonal Malaria Chemoprevention (SMC).

This is used especially for children in high-transmission seasons, and its best used for preventive rather than reactive care. In places where SMC is used, there has been a significant reduction in child mortality due to malaria.

ROTARY'S SUPPORT IN THE FIGHT AGAINST MALARIA.

Rotary International has played an important humanitarian role in combating malaria, especially in Africa.

Rotary's Contributions cover:

- 1 . Public Health Campaigns
 - Community education
 - Prevention awareness
 - Mosquito net promotion
- 2 . Funding Support
 - Support for local malaria initiatives
 - Collaboration with governments and NGOs
- 3 . Grassroots Mobilization
 - Community outreach
 - Health worker support
 - Integration with maternal and child health programs

ROTARY'S IMPACT

While Rotary is globally recognized for polio eradication, its malaria-related interventions have strengthened prevention, awareness, and community participation.

IS TAKING MALARIA FOR GRANTED DANGEROUS?

Absolutely, taking malaria for granted is extremely dangerous. Unfortunately, many Africans normalize malaria because it is common, but they fail to realise that repeated or poorly treated malaria can have devastating lifelong consequences.

Some of these consequences are:

Malaria remains a major public health challenge, especially in sub-Saharan Africa, where millions of cases and deaths still occur yearly.

1. Cerebral Malaria: This is a severe brain complication that can lead to:
 - Memory loss
 - Learning difficulties
 - Seizures
 - Permanent neurological damage
2. Chronic Anaemia:
Repeated destruction of red blood cells may cause:
 - Persistent fatigue
 - Poor child development
 - Pregnancy complications
3. Organ Failure:
Severe malaria may permanently damage:
 - Kidneys
 - Liver
 - Lungs
4. Pregnancy Risks:
In pregnant women, malaria can cause:
 - Miscarriage
 - Stillbirth
 - Low birth weight
 - Maternal death
5. Economic and Social Burden:
Frequent illness can lead to:
 - Missed school
 - Reduced productivity
 - Increased healthcare costs
 - Poverty cycle reinforcement

WHAT CAN INDIVIDUALS AND COMMUNITIES DO?

Personal Protection:

- Sleep under insecticide-treated nets
- Keep surroundings clean
- Drain stagnant water
- Use window nets and mosquito repellents
- Seek testing before treatment

Community Action:

- Support awareness campaigns
- Encourage vaccination
- Improve sanitation

- Avoid self-medication.

THE WAY FORWARD: FROM SURVIVAL TO ELIMINATION

To defeat malaria, we must each play our parts:

1 . Governments must:

- Strengthen healthcare systems
- Expand vaccine programs
- Subsidize quality treatment

2 . Health Workers should:

- Promote early diagnosis
- Educate communities

3 . Citizens must of essence:

- Stop trivializing malaria
- Prioritize prevention
- Stop self medication which often leads to drug abuse and consequently drug resistance.

Malaria is preventable, treatable, and potentially eradicable, but complacency is dangerous. The rise of vaccines, stronger treatments, and community partnerships like Rotary's provide hope, but success depends on sustained action.

For Africa, especially Nigeria, malaria is not “just another fever;” it is a disease that can destroy lives, families, and futures.

On this World Malaria Day, the question is not just **WHETHER WE ARE FIGHTING MALARIA, BUT WHETHER we ARE FIGHTING HARD ENOUGH.**

Test early. Treat properly. Prevent consistently. Advocate boldly.

Because the fight against malaria is everyone's responsibility.

District 9126.

Friends and well wishers joined in celebrating the life and times of the Late Chief Joseph Olaitan Edunfunke, who until his passing was the Esa of Okeonigbin land, Isin local government area of Kwara State.

Choppers were led by Rtn Kazeem Olanrewaju, who prayed for the peaceful repose of the departed and charged the family to uphold the good legacies their father left behind.

Rtn. Ibitayo Edunfunke appreciated CHOPS Fellowship for identifying with him, adding that their presence was a great comfort to him and prayed that the love and solidarity among Choppers continues.

CHOPS Fellowship Stands With Rtn. Ibitayo Edunfunke At Father's Burial

In an active expression of unity and mutual support, CHOPS Fellowship was live in Okeonigbin, Isin LGA of Kwara State to stand in solidarity with Rtn. Ibitayo Edunfunke at the

burial of his father, Late Chief Joseph Olaitan Edunfunke.

Rtn. Ibitayo Edunfunke is the Create Hope President of the Rotary Club of Ibadan Gold in
